

PAUL-TEC AGED CARE PERSONAL MONITORING

Since 1977 the Paul-Tec Group has specialised in aged care monitoring and professional response services for retirement villages and aged care facility residents. As an ISO9001 quality certified company, we monitor only quality personal emergency alarm equipment – especially user-friendly, Australian made, and Australian standards compliant SmartLink equipment. Our world class Personal Monitoring Facility handles two-way voice-through communications to quickly identify emergency incidents from accidental activations, and you can be sure that all incidents will be tracked by trained operators until they are resolved.

At the touch of a 'Help' button or wireless pendant, specially trained operators receive the alarm and quickly phone to verify the cause with the resident. If an emergency is confirmed, or if contact with the resident can not be established, we immediately follow your instructions to contact emergency keyholders, support staff, ambulance, etc.

Paul-Tec monitors state-of-the-art, user friendly, Australian made equipment
